Short Description

Neon effect LED strip light with single colour output and innovative 3D bend capability with free-cut technology. Sold online in 5 metre reels.

- IP67 rated casing with injection moulded connectors and end caps or various DIY options
- Uniform neon light output
- 120° beam output
- Available from stock in choice of white temperatures of 2700°K or 3000°K (4000°K on request)

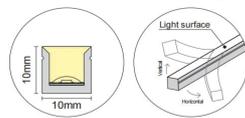

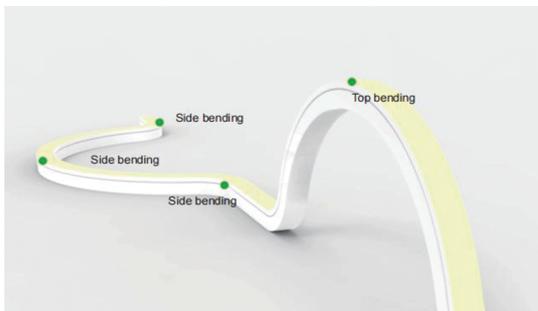

- Free-cut technology - strip can be cut anywhere
- Constant voltage strip type
- 3 year warranty
- Dimmable with Dali, DMX, PWM
- 3D bend technology - the same strip can be used in both 'top view' and 'side view' installations
- Can be custom made to order in specified lengths

Description

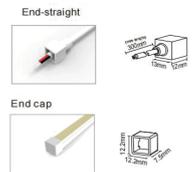

The Profile

Our neon effect LED strip is the perfect solution for interior or exterior application where a high level of waterproofing is required combined with an excellent light quality. The IP67 rating of the product means that it can be installed in wet locations and is suitable for exterior use. The product is entirely resistant to dust ingress and offers a high level of durability against solvents, saltwater and UV light.

This innovative product is compact at only 10mm x 10mm in section and also offers the best of both worlds in that it can be bent both vertically and horizontally. The 3D Bend 10mm x 10mm strip is a top and side view solution in one. In addition to the 3D bend advantage, this product does away with cut points and instead can be freely cut anywhere. The length remaining illuminates fully regardless of where the strip is cut.

3D Bending
Vertical Bending & Horizontal Bending

Specification

10x10mm 3D Bend *Free Cut* Neon Flex

Silicone construction IP67 Dimmable 12Vdc available on request*

Connector Types

Straight (standard)

Our standard end connector features a straight connection, directly into the end of the strip LED. This connector is supplied with 300mm of cable as standard and is IP67 rated. The opposite end is a simple injection moulded end cap. When powering lengths that are greater than 5m, a double end connector of this type can be specified to allow a connection at both ends of the product. This avoids any voltage drop and ensures that the strip performs perfectly along the entire length (up to 10m). Our 5 metre reels sold online feature this standard injection moulded connector at one end.

Actual product may vary from image shown

Right or Left

One option is to have the connection made on either the right or left hand side (right hand side pictured). This connector is supplied with 300mm of cable and is IP67 rated. The opposite end is a simple injection moulded end cap. When powering lengths that are greater than 5m, a double end connector of this type can be specified to allow a connection at both ends of the product. This avoids any voltage drop and ensures that the strip performs perfectly along the entire length (up to 10m).

Actual product may vary from image shown

Bottom

This connector type emerges from the underside of the strip LED. This is ideal for applications where the end of the strip is visible and the power source is behind the strip. This connector is supplied with 300mm of cable and is IP67 rated. The opposite end is a simple injection moulded end cap. When powering lengths that are greater than 5m, a double end connector of this type can be specified to allow a connection at both ends of the product. This avoids any voltage drop and ensures that the strip performs perfectly along the entire length (up to 10m).
