Short Description

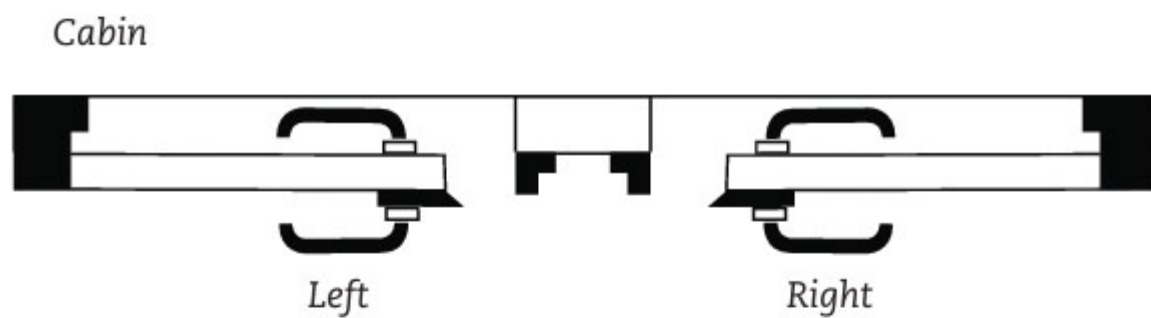

A marine-grade rim lock designed for sliding doors.

This rim lock is designed for use on doors where a mortice lock cannot be used or is not wanted. Rim locks offer a number of advantages in that they are easier to maintain and can be fitted onto very thin panels or materials without a core such as metal or composite. This lock is available in a brass or chrome plated finish and is supplied complete with a matching striker plate and two keys.

Rim locks usually have a handing and this sliding rim lock is no different. Please consult our handing diagram below to ensure that the correct hand lock is purchased for the project in question.
