Short Description

A 316-grade stainless steel thermostatic shower mixer.

This marine-grade shower mixer is designed for interior or exterior application. Being a bar mixer, the unit requires no recess or behind wall space for its installation. The only requirement is the correct positioning of the hot and cold water feeds. The bar mixer features a thermostatic mixer cartridge, offering a safe and easy-to-operate shower experience.

Thanks to the mixer's construction materials, the product is suited to a wide range of applications including healthcare or environments where a high standard of hygiene must be maintained. Marine-grade stainless steel is not only highly resistant to corrosion, but it also helps prevent bacteria build-up and therefore offers a more hygienic solution over a brass product. It is also completely lead-free. The shower is also well-suited to a marine environment including coastal properties or yachts.
