Short Description

A replacement pressure sensor head for UP9/E Marco pumps.

This R-KIT from Marco consists of a multi-voltage 12/24Vdc 4.5 bar pressure sensor head (ECU). It is compatible with the UP9/E variable speed water pump.

The sensor head is the element responsible for the pump's intelligent variable speed system, offering numerous advantages over a traditional on/off pump.

Description

Electronic Pressure Sensor

Constant control of pressure, voltage and electrical draw

Protection of the pump from short circuits and overvoltage

Automatic stop when no more liquid is present

Reduction in electrical interferences thanks to the gradual acceleration of the motor

Noise reduction during operation

Optimisation of electrical draw

Reduced wear of components and increased life span of the system

Operative functions signaled by LEDs

Additional Information

Pump Compatibility	UP9/E
Input Voltage	12 / 24Vdc
Liquid Type	Fresh water
Power Consumption	3 Amps
Manufacturer	Marco
