Short Description

A fixed carbon fibre stanchion pole with machined 316-grade stainless steel base.

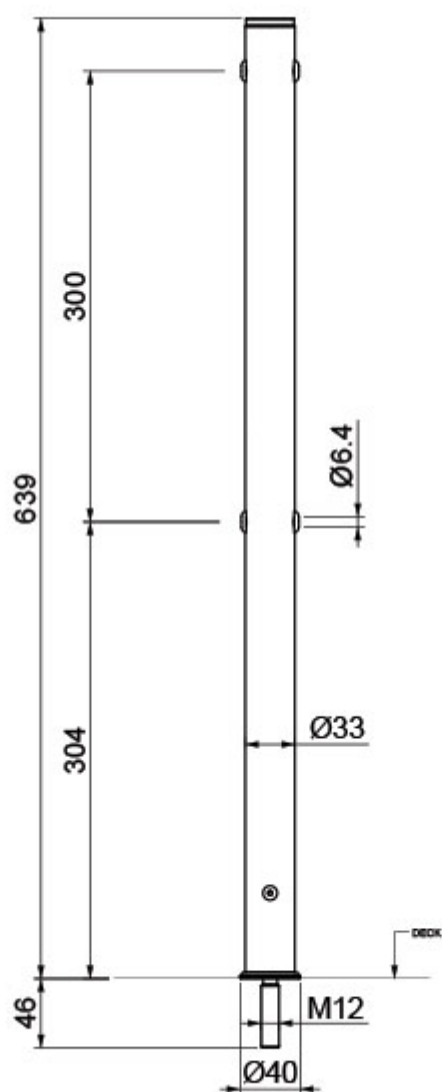

Stanchions are an important piece of safety equipment. To adhere with regulations, railings must be

provided on deck to avoid man overboard situations. This carbon fibre 630mm tall stanchion meets with ISO 15085:2023 regulations. The stanchion features an M12 46mm long threaded stud on the underside for securely fastening to the deck.

On request, the stanchions can be supplied with Ø6mm Dyneema rope in order to create a complete solution.
