

Under Bed TV Mechanism

Product Images

Short Description

Hidden Under-Bed TV Lift System

Transform your bedroom experience with our innovative motorised TV lift system that elegantly conceals your television beneath your bed when not in use.

With a single touch, watch as your TV emerges in a smooth, whisper-quiet motion—rotating and positioning itself perfectly for optimal viewing. No more bulky entertainment centers or wall mounts disrupting your bedroom's clean aesthetic.

Our premium telescopic model features advanced lifting capabilities that minimize footprint, requiring minimal clearance at the foot of your bed while maximizing functionality.

Key Benefits:

- Preserves unobstructed views and room spaciousness
- Seamless automation with precision engineering
- Space-saving design ideal for modern living
- Custom options available to match any bedroom décor

Discover the perfect blend of technology and elegance that disappears when not needed.

Description

Technical Characteristics

VOLTAGE

12-24 DC <10A

100-240 V 50/60 Hz (optional)*

CONTROL OPTIONS

Standard dry contacts, RF (optional), Home automation compatibility

NOISE LEVEL

< 45 dB

ROTATION

Also available in rotating version

VESA MOUNTING

Yes

MATERIALS

Aluminium – steel

FINISH

Standard matte black or specific RAL colour upon request

Fixed or Telescopic Bracket Our **under-bed TV mechanisms** are available in two variants: **fixed bracket** or **telescopic bracket**.

Contact us via email indicating: **The dimensions of your bed** (or furniture), the **dimensions of your TV**, and the **available space around your bed**. We'll provide you with **dimensions and load capacities** and guide you in choosing between a fixed or telescopic bracket.

Fixed Bracket In this configuration, the system emerges from beneath the bed and, once fully extended, **rotates** to bring the TV into viewing position. It's important to note that, at the foot of the bed, you'll need clear space equal to the **maximum height reached by the combined bracket and TV**.

Telescopic Bracket When space is more limited, we recommend the **telescopic version**. In this case, the

mechanism extends from beneath the bed until the TV is completely visible. Only after **rotating vertically** does the telescopic bracket **lift the TV** to the optimal viewing position. The advantage is that the footprint at the base of the bed is **more compact**, as it depends only on the **dimensions of the TV**, not the entire system.

Additional Information

Colour	Black
Manufacturer	Sea & Symphony
Installation Location	Interior
Finish	Black Powder Coated
