Short Description

The 'Strip' Folding Wall Mixer presents a sophisticated solution for compact spaces, boasting solid brass construction with a chrome-plated finish. Its 150mm folding spout, along with an incorporated hot and cold mixer, ensures efficient water control. The option of adding a rear fixing plate provides versatility, offering a flat installation surface for uneven walls and concealing the installation area when the spout is extended.

This folding mixer tap protrudes only about 30mm when retracted, optimizing space utilization. Whether with or without the fixing plate, both models require rear access for proper installation and maintenance, making it a convenient and functional choice for any space.

Please note that waste is not included with this product.
