

SB-UV Control Panel For Electronic Horns

£89.92

Excl. Tax: £74.93

Product Images

Short Description

The control panel has been designed to operate the electronic horns from the cabin. The installation time of the electronic horn is reduced thanks to the integrated microprocessor electronic chip which transmits through just one RJ45 cable all the available functions to the whistle: horn, fog signal and aux input. The electronic chip is housed in a waterproof box. It is also possible to remove the waterproof back box from the switch panel and install the panel into a dashboard.

- IP67 rating for exterior or interior application
- Fast install time thanks to single RJ45 communication cable
- Compatible with our electronic horns (see items at bottom of page)
- Features microphone gain adjustment
- Multiple control panels can be installed in series in different locations on board

Additional Information

Input Voltage	12 / 24Vdc
Power Consumption	3 Amps
Weight (kg)	0.220000
Manufacturer	Marco
