Short Description

The UX8 LED Dimmer Touch panel is the perfect partner for RGBW LED lights. You can choose the colors by moving your finger over the color wheel. In addition, the UX8 has four zones which can be selected via the buttons 1 to 4 at the top of the panel. Different scenes can be created and stored with buttons I to IV and the panel has a mode feature with 11 different modes, brightness control by zone, speed function and separate brightness control per colour.

The W button offers a standalone white light control. By pressing W briefly the white light goes on or off, and by keeping it pressed you can dim the white light.

The UX8 sends a DMX or a 2.4GHz RF signal. Through the DMX signal the 4 zones can be controlled by connecting DMX controllers + LED control lights. DMX controllers which can be used for this are the LT-840-6A or LT-820-5A. Via the 2.4GHz RF signal the four zones can be wirelessly controlled, here you connect the UX8 with R4-5A or R4-CC receiver. When using PWM Constant Voltage LED lighting you need the LED Receiver R4-5A and when using Constant Current lighting, you need the R4-CC, where you have the choice of 350mA / 700mA / 1050mA control.

The UX8 can collaborate via RF 2.4GHz with a handheld remote control which can operate the four zones on the panel. The remote control can operate up to a maximum of 100m from the UX8 which offers great flexibility in the positioning of the controller.

Via a WiFi signal, the UX8 can be connected to the WiFi-104 receiver. This makes it possible to operate the four zones via an app on your phone or tablet.

The UX8 has a universal backplate for use with a large variety of wall boxes.

Additional Information

Weight (kg)	0.300000
Manufacturer	Ltech
Input Voltage	5Vdc
IP Rating	IP20
Operating Temperature Range (°C)	-30 ~ 55 °C
Dimmer	Yes
