- Combines gangway function and davit for lifting tender
- Structure in polished or painted stainless steel
- Walkway platform in teak grating
- Possibility of installation on deck or transom
- Automatic stanchions with rope
- Supplied with hydraulic and electric control unit already wired
- Manual pump in case of emergency
- Remote control and control panel for cockpit control

Description

The rotating hydraulic passerelle is an excellent tool for both boarding and disembarking the vessel as well as launching and retrieving a tender. The design of the passerelle means that the unit blends in discretely with the transom design of the yacht and has a minimal impact on the silhouette of the hull. The product is assisted with an automatic telescoping movement and is equipped with an auto control system for the re-entry phases and correct alignment of the moving sections. The structure is available in polished or powder coated stainless steel. The standard walkway material for this model is teak grating.

Additional Information

Base Diameter (mm)	600.00
Ram to Pivot Distance (mm)	300.00
Rotation Angle	90°
