- Self-locking base with patented trigger release action.
- Straight or inclined S38 6° base socket.

Sun shade fabric not supplied.

Description

Awning Pole

Ø38mm carbon fibre pole for sun awning systems designed for use on yachts. The carbon fibre pole is finished with a gloss lacquer and is available in two different standard heights, 1.50m and 1.70m. Alternative lengths are available on request,

Fabric is simply fastened to the pole with a hook and eye. The pole can be used in any number of configurations together with other poles.

Base Socket

The innovative patented socket features a self-rising lid design. No need to screw and unscrew a lid, just simply push to pole straight into the socket and release with a spring loaded button installed on the base of the docked accessory. The socket also features a drain, allowing any water that enters to be sent straight to the bilge.

The S38 base socket is available with a straight insert and visible fixing combination only.
