- Sensor to alert helmstation when the ladder is deployed in the water

- Aluminium housing box
- To be used together with an electro-hydraulic control unit (power pack)
- Available with 4 or 5 steps

Description

The *SI402 Marea* automatic bathing ladder is a firm favourite of yacht manufacturers worldwide. Being a fully automatic system, the ladder simply deploys at a touch of a button. The ladder functions on a hydraulic system and requires a power pack to operate. This can either be a standalone unit solely for the ladder (sold separately) or it can be grouped together with other hydraulic products on a centralised system on board.

The ladder is constructed from stainless steel and can be supplied in either a polished or powder coated finish. As standard, the ladder is produced with stainless steel steps. On request, solid teak treads are also available offering a high quality feel and extending the teak deck into the water.

The *SI401 Marea* features an electronic sensor system which can be used to alert the helm when the ladder is deployed and can for instance be used to immobilise engines.

The ladder can be further customised on request with custom dimensions to suit a production boat builder's specific requirements.
