Short Description

- MC-K04 preserving fluid, to be used only once the membranes have been cleaned (using MC-K02), this chemical product can be used to maintain and preserve the membranes over the winter period or when the watermaker is not used for periods of 3 months or more
- During application dilute 50cc in 100 litres of fresh water (it is important that the fresh water does not have traces of chlorine)
- Always use gloves and a protective mask when handling
- Must be stored in a dark location and away from sources of heat
- Recommended for use with all models of Idromar watermakers
