

Wound 5 Micron Sediment Filter - 5"

£8.86

Excl. Tax: £7.38

Product Images

Short Description

A 5" wound 5 micron sediment filter for water desalination systems.

This filter is smaller than the 10" pre-filters and, in the case of Idromar watermakers, is typically installed on the main body of the watermaker. This filter provides another pre-membrane filtration of the water, protecting the membranes from damage and prolonging their life. This filter is typically found installed next to a 20 micron filter.

- 5" 5 micron water filter
- Fitted to glass bowls on the front of all Idromar watermakers
- Replacement required when the filter is visually dirty or becomes black
- Always replace during winterisation

Additional Information

Watermaker Model	MC1J, MC2J, MC3J, MC5S, MC9S, MC12S, MC15S
Weight (kg)	0.060000
Manufacturer	Idromar
