

# Integrated Platform Tender Launch

## Product Images

## Short Description

The Besenzoni TL Tender Lift system is an innovative solution when a lowering platform is not required. With the Tender Lift, a small jet tender (or similar) can be effortlessly lowered and retrieved from the water without the need for an unsightly crane. This system can be used on smaller craft where the tender remains located on the aft platform.

The Tender Lift is hydraulically powered and requires a separate power pack to function.

- Hydraulic tender lifting system
- Stainless steel passivised/electro-polished structure
- Emergency hydraulic bypass circuit
- Lifting capacity 400kg including the weight of the structure
- Twin or single mechanical arms
- Raise/lower and slider movements
- The maximum lifting capacity includes the weight of the platform and the tender with engine and fluids
