

XL Platform Ladder

Product Images

Short Description

The LP100 hydraulic platform is an excellent example of Besenzoni's constant product innovation. The system evolves the traditional bathing platform into an extending space whilst providing user friendly access to the stern of the craft. The system hydraulically extends from out of its cassette and can then be lowered into the sea to create a stunning and safe bathing area or alternatively raised up to the dockside to provide an impressive full beam boarding facility. A secondary extending section offers added reach for more comfortable and effortless boarding. The LP100 can negate the need for a hydraulic gangway, offering both the gangway and platform functions in one single product.

Constructed entirely from stainless steel, the LP100 is a stunning feature on any yacht and can be customised

to suit the project in question.

The product is available in two standard weight capacities to suit a wide number of projects: 300Kg and 850Kg. The total weight capacity includes the weight of the platform structure and tender with engine and all fluids. Custom solutions for larger capacities are available.

- Bathing platform with integrated ladder function
- 316-grade stainless steel structure with solid teak platform surface
- Hydraulic lifting and lowering action
- Secondary extending platform facilitates access to the staircase
- Manual stanchions
- Impressive full beam size

Additional Information

Weight (kg)	700.000000
Lifting Capacity at Maximum Extension (kg)	400.00
Manufacturer	Besenzoni
