

Pop-up & Slide Roof System

Product Images

Short Description

An innovative automatic roof system which offers the user the best of both worlds; an open style yacht for summer cruising and an enclosed helm for protected or winter voyages. The pop-up and slide style mechanism discretely slides the roof panel away and into its own housing, maintaining the clean lines of the yacht whether open or closed.

The large glass panel with UV protection provides plenty of natural light in the helm, making the space feel bigger.

- Structure made in aluminium
- Innovative electric system to allow the roof to be opened by double lifting and sliding movement
- Glass top with UV protection film
- Plug and play installation
- Water resistant system (not watertight) requires correct drainage of surrounding mouldings
- Custom-made dimensions easily adaptable to all types of yacht.
