

Automatic Anchor Launch

Product Images

Short Description

The Besenzoni anchor launching system is a fully customisable hidden anchor solution. With this system on board, the anchor need not be stored on deck together with its associated winching system. This keeps the bow area completely free from hardware, making the space more usable. In addition, anchors will always collect dirt and remnants of salt water when raised. With the anchor launching system, the deck remains clean and free from debris.

- Electropolished stainless steel structure (can also be powdercoated)
- Electric winch mechanism
- 316 grade stainless steel chain
- Customisable to suit craft design
- Ideal for craft around 12.5m in length
