

# Powerwings - NMEA 2K Control Paddles

## Product Images

## Short Description

---

An evolution in smart wheel design. *Powerwings* gives the user the ultimate control over systems on board. The paddles connect into the NMEA 2K system on board and can be used to control a wide variety of components in a similar fashion to the stalks found behind the wheel in the automotive sector. Examples of the equipment that can be controlled via the paddles include our Gallinea windscreen wiper systems, audio such as our Rockford Fosgate products, trim tabs, navigation screen functions, engine controls and much more.

The *Powerwings* paddles are fully customisable for our larger clients with the possibility to laser etch the logos or symbols required in order to guide the user to the correct function. 7 buttons per side provides the user with 14 different actions at their fingertips. Add the option of double functionality of each button with a push and hold command and you can take those 14 actions up to an impressive 28. When operating any of the buttons the backlit symbols gently flash to communicate that the command has been received.

*Powerwings* are compatible with the full range of Gussi wheels. With the added advantage of an IP67 rating, the *Powerwings* paddles can be used in any application.

## Description

---

### What can you control?

The paddles connect into the NMEA 2K system on board. Any component that also integrates into this system can ultimately be controlled in some way by the *Powerwings* paddles behind the wheel. Examples of possible uses:

- Windscreen wipers (Gallinea systems)
- Audio
- Trim tabs
- Engine (cruise control etc)
- Lighting
- Horn
- Gussi heated steering wheel
- MFD control (e.g. Garmin GRID20 functions)

## Installation

The Powerwings system works wirelessly, communicating the command to a small fob which is connected to the NMEA 2K system.

## Wheel Compatibility

*Powerwings* is a unique solution as any Gussi wheel is compatible. This means that boat builders can swap and change wheels from boat model to boat model but the *Powerwings* can always remain the same, providing a recognised and user friendly control system, regardless of the vessel. Gussi has a large range of wheel designs to suit all styles of craft. On request, custom wheel designs can be developed and manufactured.

### Additional Information

---

Weight (kg)	0.500000
Manufacturer	Gussi
