Short Description

Bino 65 with Lip fender profile is robust and easy to install. Unlike the smaller Bino 40 profile, Bino 65 with Lip features a hidden stainless steel fixing bar which compresses the profile firmly against the installation surface ([sold separately](#)). Bino 65 is a medium to heavy duty rub rail, offering excellent impact absorption and resistance to damage. It is a profile that has been designed for a flat surface installation but can be bent to follow curves and various shapes.

The profile comes manufactured in two separate pieces. It has a flexible base section that is fixed to the hull

together with the stainless steel bar. The top piece then covers the screws or rivets, leaving a clean finish with no visible fixings. No joins are necessary, Bino 65 with Lip can be ordered in the exact length you require up to 300 metres, ensuring that the entire installation can be carried out with a single continuous piece.

Bino 65 is perfect for a variety of different marine applications such as yachts, military boats, commercial boats, docks and wharves, tenders, pipe protection, and luxury vessels. End caps are available to complete the installation.

Description
