

LaPasserella - Electric Passerelle

Product Images

Short Description

A new concept and an excellent alternative to the traditional hydraulic automatic gangway. LaPasserella is an all-electric boarding gangway offering some considerable advantages from an hydraulic unit.

- **Environmentally friendly** - no hydraulic oil and a large reduction in the use of polluting materials such as plastic and rubber
- **Lightweight** - not only is the actual gangway unit lighter than an hydraulic equivalent but there is also no requirement for a powerpack and associated hoses etc which saves around 30kg
- **Energy efficient** - Removal of the power pack also offers a reduction in energy consumption. LaPasserella's electronic control system has also been optimised to use less current than a standard gangway
- **Quiet operation** - the electric system is very quiet without the usual hum or reverberation of a powerpack

More product information coming soon...
