

LED Illuminated Mirrors

Product Images

Short Description

From concept through to delivery, we offer a custom mirror manufacturing service for OEM boat builders and interior designers. Mirror designs can be round or straight edged and can feature LED illumination for applications such as vanity mirrors.

Typical construction material is brass or stainless steel but aluminium can also be used in some cases, this is led by the mirror design. Brass mirrors can be finished in a variety of ways with various galvanic treatments and platings. Stainless steel mirrors can be polished, brushed or painted and aluminium mirrors are for a painted finish only.

LED illumination is fully customisable in terms of voltage (12 or 24Vdc) and colour temperature.

Images shown are previous projects, design rights may lie with the individual clients. Minimum order quantities may apply.

Additional Information

Manufacturer	Foresti & Suardi
Weight (kg)	3.000000
